Live Session Inception Booklet

For Design Sessions, Energy Modelling Tweaks and Much Much More!

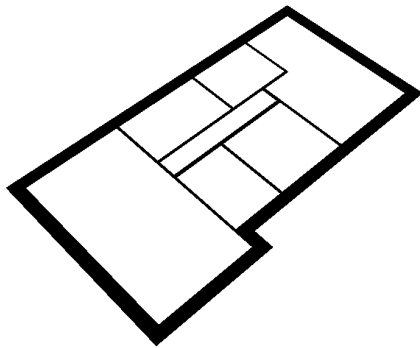

Design Live Sessions

Ever sick of the to and fro between your designer and Your dream home. Here at Earth Cycle all our designs can be created via the web through an online session. All you need is a broadband connection and some great ideas!!

What can it look like?

A model is created first in sketch form as you mass out simple lines for rooms using intelligent dimensions for all room types.

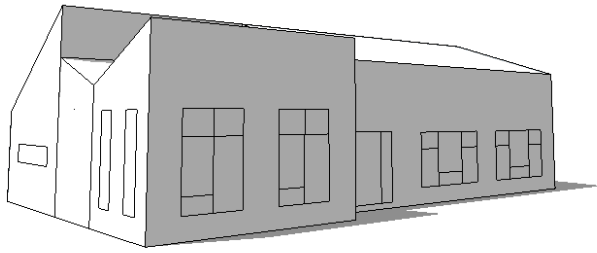

Next furniture is added and the walls are made 3D to give an idea of scale

And don't worry if this sketch is not your taste, we can update live as we go!.

Once you are happy, then, based on Your preferences; The exterior shell is massed in lines;

Using specialist software windows are created and real life textures are applied

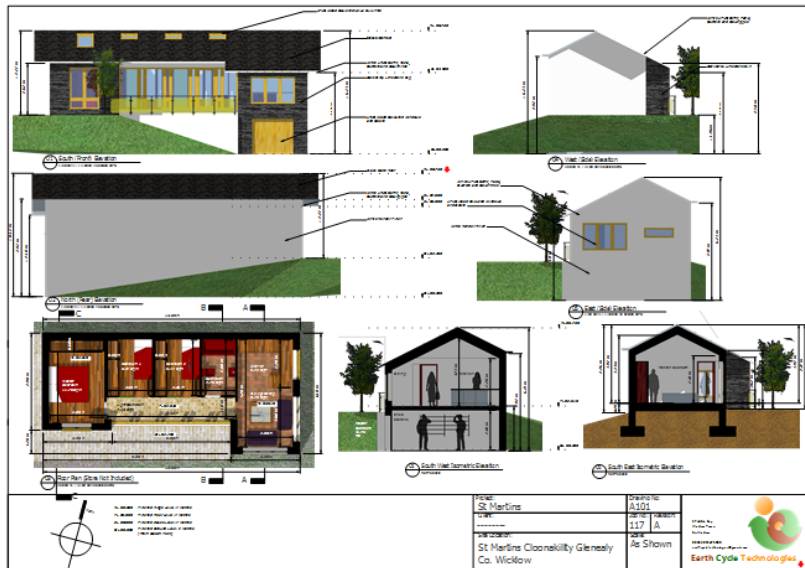

Last but not least! You can see Your home on Your site with its surroundings before it's even built!!

Contd....

Later this model can be transformed into planning and working drawings such as these:

What else can be done live?

Everything!! However there are some very long tasks that should be completed offline and checking offline afterwards will also be needed in most cases as well.

Valuable online sessions can be carried out for:

- Tweaking Passive House Model Energy Balances, mechanical systems and fabric / glass specifications
- Ditto for DEAP/BER Energy Assessments
- Tweaking textures for photomontage renders

Possibilities are limitless!

Fee's for Live Sessions

All live sessions are charged at €65 / hr. Normally sessions range from 1 hr to 4 hrs, it's rare but occasionally full days have been used.

If you would like to organize a live session please email info@earthcycle.co

Many thanks for your custom.
